DANNY OROZCO

OSP Planning Engineer | Outside Plant Fiber Network Planning & Capacity

(909) 695-8326 | danny@orozcoengineering.com | Remote-Ready

PROFESSIONAL SUMMARY

Results-driven OSP Planning Engineer with extensive experience assessing F1 feeder-fiber capacity, tracing existing routes, identifying fiber shortages, and developing reinforcement plans within Local/ILEC-style networks. Proven ability to determine network capacity needs and produce reinforcement recommendations **prior to** the engineering/design phase. Strong background supporting Fiber-to-the-Business (FTTB) and customer-driven fiber deployments, including capacity analysis, route verification, and construction-ready planning packages. Experienced reviewing network records and systems to evaluate fiber availability and trace infrastructure. Skilled in GIS mapping, QA/QC, cost estimating, and independent remote execution across aerial, underground, and buried facilities.

CORE COMPETENCIES

- F1 Feeder-Fiber Capacity Assessment
- Fiber-to-the-Business / Customer Fiber
- Aerial, Underground & Buried Fiber
- Fiber Optic Design (GPON / FTTX)
- Route Tracing & Shortage Identification
- Network Records & Fiber Availability
- Conduit, Vault & Pathway Analysis
- QA/QC of Designs & Construction Docs
- Reinforcement Planning (Pre-Design)
- Planning Packages & Cost Estimates
- GIS / Mapping & Engineering Handoff
- Independent Remote Work Execution

PROFESSIONAL EXPERIENCE

OSP Engineer

Pearce Services | Remote

- Assess F1 feeder and distribution fiber capacity and routing for underground and aerial networks; identify shortages and constraints, and develop reinforcement recommendations prior to detailed engineering and field execution.
- Perform detailed capacity and constructability reviews of OSP/ISP designs using AutoCAD, IQGeo, and Bluebeam; trace existing routes, evaluate fiber availability, and prepare planning packages that support Engineering handoff.
- Prepare project budgets, cost estimates, and planning documentation by evaluating labor, materials, and regional construction costs—supporting resource allocation and construction-ready deliverables for customer-driven fiber growth.
- Deliver clear, accurate planning packages that enable efficient Engineering review and successful fiber deployment, including support for Fiber-to-the-Business and network expansion projects.

Planner II

Cox Communications | Irvine, CA

- Developed Business-As-Usual (BAU) engineering and planning designs for OSP and ISP fiber optic networks, ensuring capacity alignment with customer requirements; determined network capacity needs and reinforcement approaches ahead of detailed design.
- Analyzed network records and route designs to support cable relocation, upgrades, and reinforcement of underground and aerial plant; traced existing infrastructure and identified capacity gaps for Fiber-to-the-Business and network improvement initiatives.
- Prepared project documentation, cost tracking, and billable work packages that supported accurate job costing and timely delivery of network reinforcement and customer-driven fiber projects.
- Applied established planning and engineering processes while managing multiple priorities independently in a high-volume environment, producing planning packages for Engineering handoff.

Senior Engineer (OSP Consulting)

CTC Technology | Remote

- Provided OSP planning and technical guidance for fiber optic infrastructure projects; conducted capacity analysis, route verification, and reinforcement planning to support construction-ready engineering packages for aerial and underground facilities.
- Conducted nationwide site assessments, route verification, and field data collection to support capacity analysis, identify shortages, and develop accurate project documentation and reinforcement recommendations.
- Coordinated with construction crews, utilities, municipalities, and customers to resolve field issues and ensure projects progressed according to engineering specifications and schedule.

OSP Lead Engineer

WYYERD Fiber | National City, CA

- Engineered scalable OSP/ISP fiber network architectures, including GPON backbone design, fiber pathway routing/assignment, and capacity planning for network expansion and Fiber-to-the-Business deployments.
- Designed distribution layouts, terminal placements, and cabinet configurations; determined equipment sizing and fiber assignments to optimize capacity and readiness for activation.
- Prepared detailed construction documentation and coordinated installation activities with field teams to ensure constructability and quality.

Project Manager

AT&T | Rosemead, CA

• Verified costs, labor, and resource allocations for OSP/ISP fiber projects; managed schedules, ECDs, and deliverables to keep work on time and within budget.

• Reviewed Scopes of Work, monitored workload, and applied AT&T engineering systems (including Aramis and Waldo) to support planning, design, documentation, and delivery of fiber infrastructure; reviewed network records to evaluate fiber availability and trace existing infrastructure.

• Collaborated with engineering, construction, and stakeholders to resolve issues and achieve operational objectives on complex outside plant deployments supporting network growth and customer demand.

Project Manager / Design Engineer

CHC Consulting | Anaheim, CA

• Designed fiber routes, created splicing prints and work orders, and prepared cost quotes for OSP projects; coordinated permits and pathway approvals with cities and utilities (including AT&T duct and pole attachments).

• Produced CAD drawings and engineering documentation supporting utility and construction teams on land development and telecommunications infrastructure projects.

TECHNICAL SKILLS & TOOLS

OSP & Planning: F1 Feeder-Fiber Capacity Assessment • Route Tracing & Shortage Identification • Reinforcement Planning (Pre-Design) • Fiber-to-the-Business / Customer Fiber Support • Conduit & Vault Planning • Cost Estimating • Planning Packages & Engineering Handoffs

Systems & Software: AutoCAD • IQGeo • Bluebeam • ArcGIS / GIS Mapping • MicroStation • AT&T Design Systems (Aramis, Waldo) • Network Records Review & Fiber Availability Analysis • Microsoft Excel, Word, PowerPoint, Project, Visio • Google Earth familiarity

Additional: QA/QC of Construction Drawings • As-Built Documentation • Permitting Coordination • Stakeholder Communication • Independent Remote Execution

EDUCATION

Associate of Science, Business Administration — DeVry University | 2010 – 2012

Extensive equivalent professional experience (17+ years) in OSP network engineering, planning, design, and project delivery across major telecommunications providers, including capacity assessment, route analysis, and reinforcement planning for feeder and distribution fiber networks.
