odanny626-collab.github.io | Fontana, CA

17+ YEARS OSP FIBER ENGINEERING • AT&T & COX EXPERIENCE • CONTRACT & OVERFLOW CAPACITY

SERVICES

- **OSP Planning & F1 Feeder Fiber:** F1 feeder and distribution capacity assessment, route tracing, fiber-shortage identification and reinforcement recommendations before design.
- **Distribution / FTTH-FTTX Design:** GPON distribution layouts, terminal placements, cabinet configurations, fiber assignments, splicing prints and work orders.
- **GPON / OLT Planning:** GPON backbone and capacity planning, with distribution sized around OLT and PON capacity.
- **Fiber-to-the-Business:** Capacity analysis, route verification and planning packages for customer-driven fiber and network expansion.
- **Make-Ready & Pole Attachments:** Make-ready and pole-loading support, pole-attachment and duct coordination (including AT&T duct and pole attachments).
- **Permitting & Utility Coordination:** Permit and pathway approvals with cities and utilities; coordination with crews, municipalities and customers.
- **Field Walkouts & Route Verification:** Site assessments, route verification and field data collection to inform design.
- **QA/QC, As-Builts & Estimates:** Constructability and QA/QC reviews of OSP/ISP designs, as-built documentation, cost estimates and budgets.

ABOUT THE ENGINEER

Danny Orozco is an OSP Planning Engineer and the owner of Orozco Engineering, based in Fontana, California. He brings 17+ years of outside plant fiber engineering, planning, design and project delivery experience, including work with AT&T and Cox. Danny specializes in F1 feeder-fiber capacity assessment, route tracing and reinforcement planning, along with GPON/FTTX distribution design, permitting and utility coordination, QA/QC and as-built documentation. He works in AutoCAD, IQGeo, Bluebeam, ArcGIS and MicroStation, and delivers construction-ready planning packages for Engineering handoff. Orozco Engineering supports OSP contractors, engineering firms and fiber providers with contract and overflow capacity across Southern California and the Inland Empire, and remotely anywhere.

AT A GLANCE

Service area: On-site: Southern California and the Inland Empire. Remote: projects anywhere.

Plant: Aerial, underground and buried plant: conduit, vault and pathway analysis

Tools: AutoCAD, IQGeo, Bluebeam, ArcGIS / GIS mapping, MicroStation, AT&T design systems (Aramis, Waldo), SharePoint (Ziply Fiber project environment), Google Earth, Microsoft Excel, Word, Project & Visio

PROJECT EXAMPLES (redacted; client names withheld)

01 F1 Feeder Fiber Capacity & Reinforcement Route

Client	Tier-1 ILEC
Scope	Traced existing feeder routes, reviewed fiber availability against demand, identified shortages and proposed reinforcement fiber
Role	OSP Planning Engineer: route tracing, fiber availability, shortage ID, reinforcement plan + cost estimate
Tools	IQGeo, AutoCAD, Bluebeam, ArcGIS
Delivered	Capacity assessment, reinforcement recommendation, estimate, planning package for Engineering handoff

02 FTTH / GPON Distribution Build

Client	Regional fiber provider
Scope	FTTH distribution design on a GPON architecture: distribution fiber, terminals, cabinets and splicing, planned around OLT and PON capacity
Role	OSP Lead / Design Engineer: GPON layout, terminals, cabinets, equipment sizing, fiber assignments
Tools	AutoCAD, IQGeo, MicroStation, Bluebeam
Delivered	GPON design, splicing prints, work orders, construction docs, as-builts

03 Make-Ready & Permitting Package

Client	OSP contractor (for Tier-1 ILEC)
Scope	Make-ready, pole-attachment applications and permits for an aerial and underground fiber route, coordinated with cities and utilities
Role	Design Engineer / PM: walkout, route design, CAD permit drawings, pole-attachment and duct coordination
Tools	AutoCAD, MicroStation, Bluebeam, Google Earth
Delivered	Permit drawings, make-ready / attachment docs, utility and city submittals, as-builts

WHY CONTRACTORS USE OROZCO ENGINEERING

- Overflow and subcontract capacity when your backlog grows
- Planning packages ready for Engineering handoff
- Independent remote execution, plus field support in SoCal
- Carrier-level experience (AT&T, Cox) on ILEC-style networks

Provider names indicate past experience only and do not imply a current client relationship or endorsement. Project examples are redacted; client names are withheld.
